

Bonded DSL

Bonded DSL from NSN offers an ideal alternative for small businesses, home workers and those based in remote locations who need a more resilient and cost effective solution for connectivity.

Bonding up to 4 ADSL lines creates one single broadband connection.

How does Bonded DSL work?

- Multiple lines bonded – bond up to 4 broadband lines together and as soon as the lines hit the local exchange, the bandwidth is combined - creating one high speed connection
- Multiple routers – multiple routers work to combine the individual line speeds and create one virtual connection to the internet
- More resilient – by using multiple broadband lines and routers a more resilient solution is provided. If one router or line fails, the connection will continue using the remaining lines
- Reliable network – NSN have a target of 99.99% uptime on our network

Who would use Bonded DSL?

- Companies based in rural locations
- Companies with home/remote workers
- Companies with satellite offices
- Companies looking for a cost effective alternative to Direct Internet Access
- Companies with the requirement to run VoIP and hosted solutions across ADSL technology
- Companies who are not able to get Superfast Fibre Broadband

What makes Bonded DSL from NSN different?

- No capping of lines – we do not cap the speed to the lowest performing line - we combine the individual bandwidth of each so your customers receive the highest possible speed
- Flexible – the solution can bond up to 4 lines, giving your customers the bandwidth that their business needs. Usage can be increased or decreased as required throughout the contract
- Online portal – access to an online portal is provided meaning more control. Lines and routers can be re-booted, usage levels can be altered and usage statistics can be viewed at anytime
- IP Address – as one connection is formed, choose to have either a single static or multiple IP addresses
- 21CN Network – where possible we provide connectivity to our customers using the 21CN network
- Largest network reach – having relationships with multiple carriers gives us the largest network reach of any provider
